

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings of claims in the application:

1. (Currently Amended) A focusing flashlight, comprising:  
a tail cover, ~~a housing body, and~~  
a reflector and a bulb holder installed on ~~the~~ a housing body, ~~characterized in that~~  
wherein the reflector and the bulb holder are connected ~~with each other~~ by ~~the~~ a plurality of  
screw threads to adjust the position of ~~the~~ a bulb; and ~~there is provided~~  
a lock device between the reflector and the bulb holder to fix the relative position of the  
reflector and the bulb holder.
2. (Currently Amended) The focusing flashlight according to claim 1, further comprising  
~~characterized in that,~~  
a plurality of grooves elongated in ~~the~~ an axial direction are formed on ~~the~~ an outer wall  
of ~~the~~ a barrel portion of the ~~said~~ reflector at equal intervals; the ~~said~~ lock device is a cylindrical  
part with protruding ribs formed on ~~its~~ an inner wall at equal intervals to be engaged with the  
~~said~~ grooves and with projections formed on ~~the~~ an end facing the bulb holder at equal intervals;  
and the bulb holder is provided with a flange on ~~the~~ an end contacting the housing body and a  
plurality of recesses for receiving the ~~said~~ projections are formed on the said flange at equal  
intervals.
3. (Currently Amended) The focusing flashlight according to claim 1, further comprising  
~~characterized in that a~~ the plurality of grooves elongated in the axial direction are formed on the  
outer wall of the barrel portion of the ~~said~~ reflector at equal intervals; the ~~said~~ lock device is a

cylindrical part with protruding ribs formed on ~~it's~~ the inner wall at equal intervals to be engaged with the ~~said~~ grooves and with the recesses formed on the end facing the bulb holder at equal intervals; and the bulb holder is provided with a flange on the end contacting the housing body and the ~~said~~ flange is provided with a plurality of projections on the side facing the lock device at equal interval to be engaged with the ~~said~~ recesses.

4. (Currently Amended) The focusing flashlight according to claim 2, further comprising ~~or~~ ~~3, characterized in that the~~ an inside diameter of the ~~said~~ lock device is approximately equal to the an outside diameter of the barrel portion of the reflector; the ~~said~~ grooves ~~do not penetrate~~ penetrating the wall of the barrel portion of the reflector; and the depth of the ~~said~~ grooves is approximately equal to the height of the ~~said~~ protruding ribs.

5. (Currently Amended) The focusing flashlight according to claim 2, further comprising ~~or~~ ~~3, characterized in that~~ the width of the ~~said~~ grooves formed on the outer wall of the barrel portion of the reflector is not uniform, with the portion of the grooves near ~~the~~ a lampshade portion of the reflector being relatively narrower and the portion of the grooves near the bulb holder growing larger.

6. (Currently Amended) The focusing flashlight according to claim 2, further comprising ~~or~~ ~~3, characterized in that~~ the width of the ~~said~~ grooves on the outer wall of the barrel portion of the reflector is uniform, and a spring around the barrel portion of the reflector is provided between the lock device and the reflector.

7. (Currently Amended) The focusing flashlight according to claim 1, further comprising ~~characterized in that a~~ the plurality of protruding ribs elongated in the axial direction are formed on the outer wall of the barrel portion of the ~~said~~ reflector at equal intervals, the ~~said~~ lock device

is a cylindrical part with grooves formed on ~~it's~~ the inner wall at equal intervals to be engaged with the protruding ribs and with projections formed on the end facing the bulb holder at equal intervals; and the bulb holder is ~~provide~~ provided with a flange on the end contacting the housing body and a the plurality of recesses for receiving the ~~said~~ projections are formed on the ~~said~~ flange at equal intervals.

8. (Currently Amended) The focusing flashlight according to claim 1, further comprising ~~characterized in that~~ a the plurality of protruding ribs elongated in the axial direction are formed on the outer wall of the barrel portion of the ~~said~~ reflector at equal intervals; the ~~said~~ lock device is a cylindrical part with grooves formed on ~~it's~~ the inner wall at equal intervals to be engaged with the protruding ribs and with the recesses formed on the end facing the bulb holder at equal intervals; and the bulb holder is provided with a flange on the end contacting the housing body and the ~~said~~ flange is provided with a plurality of projections on the ~~side~~ facing the lock device a equal intervals to be engaged with the ~~said~~ recesses.

9. (Currently Amended) The focusing flashlight according to claim 7, further comprising ~~or 8, characterized in that~~ the inside diameter of the ~~said~~ lock device is approximately equal to the outside diameter of the barrel portion of the reflector; the ~~said~~ grooves ~~do not penetrate~~ penetrating the wall of the lock device; and the depth of the ~~said~~ grooves is approximately equal to the height of the ~~said~~ protruding ribs.

10. (Currently Amended) The focusing flashlight according to claim 7, further comprising ~~or 8, characterized in that~~ the width of the ~~said~~ grooves formed on the inner wall of the lock device is not uniform, with the portion of the grooves near the lampshade of the reflector being larger and the portion of the grooves near the bulb holder becoming smaller.

11. (Currently Amended) The focusing flashlight according to claim 7, further comprising ~~or 8, characterized in that~~ the width of the ~~said~~ grooves formed on the inner wall of the lock device is uniform, and a spring around the barrel portion of the reflector is provided between the lock device and the reflector.

12. (Currently Amended) The focusing flashlight according to claim 2, ~~any of claim 2, 3, 7 or 8 characterized in that~~ the number of the ~~said~~ grooves is the same as or an integral multiple of the number of the said protruding ribs.

13. (Currently Amended) The focusing flashlight according to claim 2, ~~any of claim 2, 3, 7 or 8 characterized in that~~ the number of the ~~said~~ recesses is the same as or an integral multiple of the number of the said projections.

14. (Currently Amended) The focusing flashlight according to claim 1, further comprising ~~characterized in that~~ the ~~said~~ screw threads include the inner screw threads formed on the inner wall of the barrel portion of the said reflector and the outer screw threads formed on the outer wall of the ~~said~~ bulb holder and to be engaged with the ~~said~~ inner screw threads.

15. (New) The focusing flashlight according to claim 3, further comprising an inside diameter of the lock device is approximately equal to an outside diameter of the barrel portion of the reflector; the grooves not penetrating the wall of the barrel portion of the reflector; and the depth of the grooves is approximately equal to the height of the protruding ribs.

16. (New) The focusing flashlight according to claim 3, further comprising the width of the grooves formed on the outer wall of the barrel portion of the reflector is not uniform, with the

portion of the grooves near a lampshade portion of the reflector being relatively narrower and the portion of the grooves near the bulb holder growing larger.

17. (New) The focusing flashlight according to claim 3, further comprising the width of the grooves on the outer wall of the barrel portion of the reflector is uniform, and a spring around the barrel portion of the reflector is provided between the lock device and the reflector.

18. (New) The focusing flashlight according to claim 8, further comprising the inside diameter of the lock device is approximately equal to the outside diameter of the barrel portion of the reflector; the grooves not penetrating the wall of the lock device; and the depth of the said grooves is approximately equal to the height of the protruding ribs.

19. (New) The focusing flashlight according to claim 8, further comprising the width of the grooves formed on the inner wall of the lock device is not uniform, with the portion of the grooves near the lampshade of the reflector being larger and the portion of the grooves near the bulb holder becoming smaller.

20. (New) The focusing flashlight according to claim 8, further comprising the width of the grooves formed on the inner wall of the lock device is uniform, and a spring around the barrel portion of the reflector is provided between the lock device and the reflector.

21. (New) The focusing flashlight according to claim 3, further comprising the number of the grooves is the same as or an integral multiple of the number of the said protruding ribs.

22. (New) The focusing flashlight according to claim 7, further comprising the number of the grooves is the same as or an integral multiple of the number of the said protruding ribs.

23. (New) The focusing flashlight according to claim 8, further comprising the number of the grooves is the same as or an integral multiple of the number of the said protruding ribs.

24. (New) The focusing flashlight according to claim 3, further comprising the number of the recesses is the same as or an integral multiple of the number of the projections.

25. (New) The focusing flashlight according to claim 7, further comprising the number of the recesses is the same as or an integral multiple of the number of the projections.

26. (New) The focusing flashlight according to claim 8, further comprising the number of the recesses is the same as or an integral multiple of the number of the projections.
